

# Greenbury Point Environmental Concerns

**Over 817 species of plant and animal life have been documented on Greenbury Point since 2020. More than 80% are native species.**

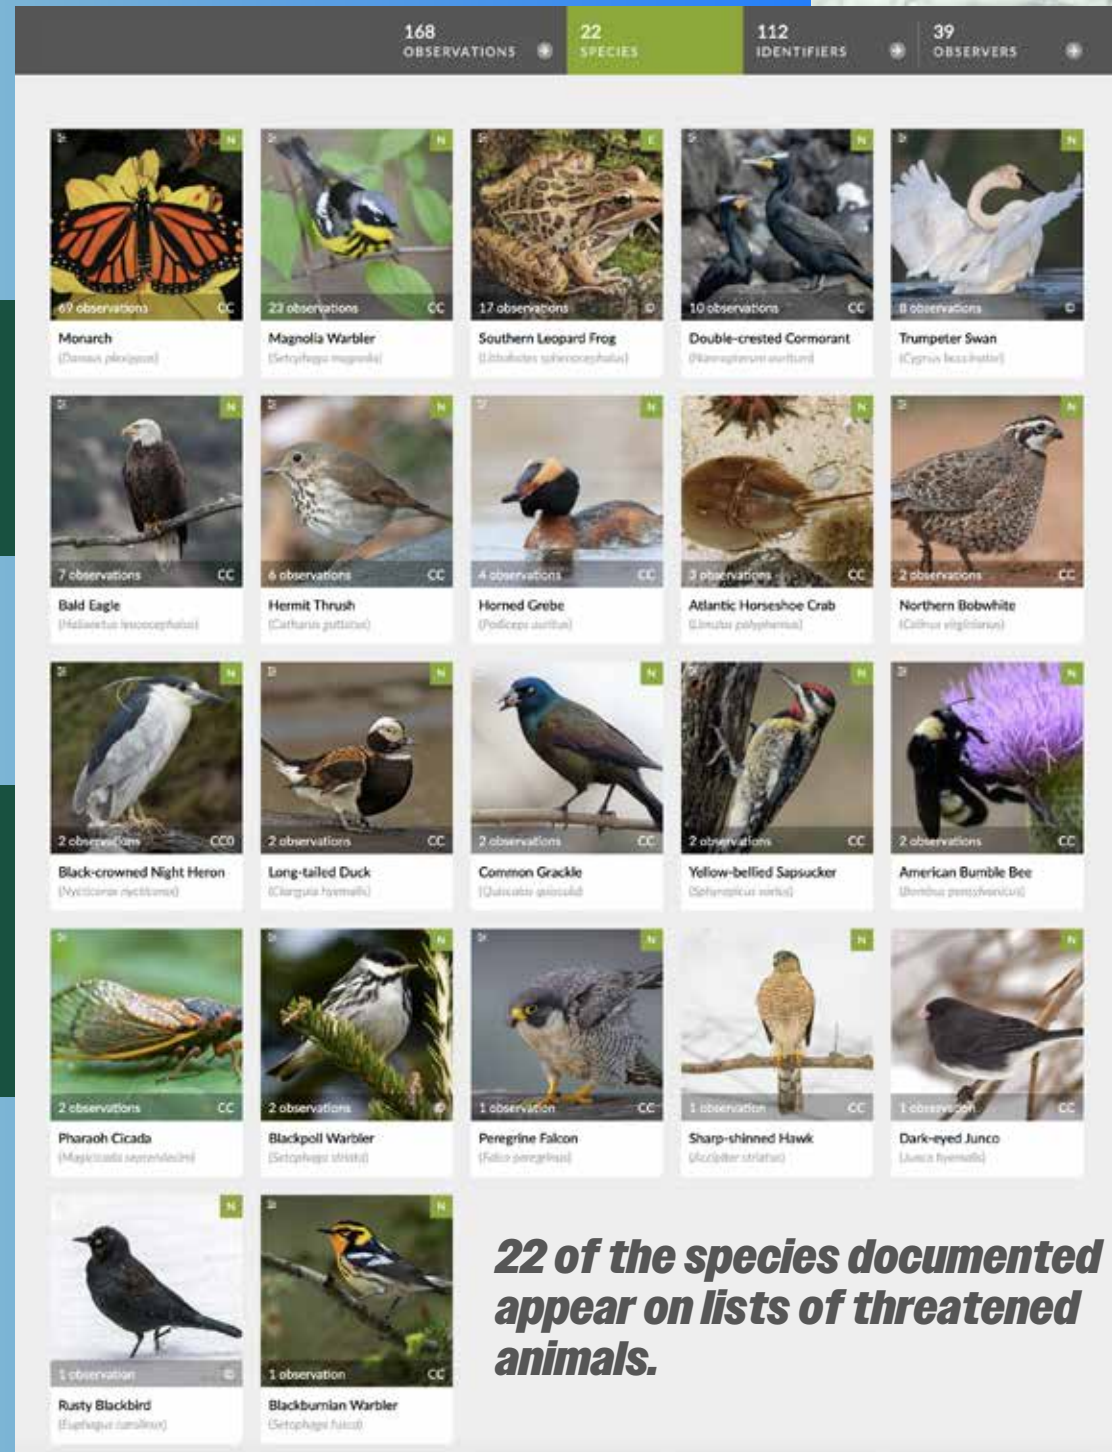

**Greenbury Point is 100% within the critical area of the Chesapeake Bay. Disturbance of land and forest buffers will profoundly impact the water quality of the Bay.**

**Loss of habitat is the number-one cause of population decline in plant and animal populations.**

**Greenbury Point was home to the last known breeding colony of Northern Bobwhite Quail in Anne Arundel County. Believed to have died out in 2012, there were 14 documentations of quails calling on Greenbury Point.**

**Greenbury Point is a bird watching “hot spot” in Anne Arundel County.**

**\*All data is from Greenbury Point Biodiversity Project, iNaturalist and eBird.org**

**22 of the species documented appear on lists of threatened animals.**
